LIGHT OUTPUT-OVER-TIME TEST
Lightwave LW2000 vs. High-Intensity Lamp
Test conditions: Fresh Eveready #E91, AA batteries
(x2 for Name Brand High-Intensity Flashlight; x3 for LW2000).
Light bulb type: High-Intensity lamp, new, bi-pin;
LW2000, super-bright white light emitting diode (LED, x4).
Luminous intensity (lux) measured at 12" (0.3 meters).
Sample size: One each flashlight, continuous operation.
High-Intensity Lamp initial luminous intensity was 1200 lux.
End of test: zero lux at 5 hours, 40 minutes (batteries dead).
LW2000 initial luminous intensity was 773 lux.
End of test: 180 lux at 30 hours; Useable light after 300 hrs.
Both flashlights matched 700 lux at 30 minutes
Luminous intensity (lux) at 12 inches (0.3
